THE MOST MODERN METHODS IN FOREIGN LANGUAGE TEACHING AND THEIR ADVANTAGES

Z.Sh.Mahmudova, teacher, Chirchik State Pedagogical University, Chirchik

Annotatsiya. Ushbu tezis yosh o'quvchilarga chet tilini o'rgatishda qo'llaniladigan zamonaviy usullar va ularning afzalliklariga bag'ishlangan. Berilgan tezisda bugungi kunda eng zamonaviy usullar qisqacha tavsiflangan. Bugungi kunda eng zamonaviy usullarning turlari, ulardan foydalanish qoidalari va ijobiy tomonlari muhokama qilinadi.

Kalit so'zlar: usul, texnika, protsedura, PPP, TBL, Suggestopedia, TPR.

Аннотация. Данная работа посвящена современным методам, используемым в обучении младших школьников иностранному языку, и их преимуществам. В данном тезисе кратко описаны наиболее современные на сегодняшний день методы. Обсуждаются виды наиболее современных методов на сегодняшний день, правила их использования и их положительные стороны.

Ключевые слова: метод, техника, процедура, PPP, ТБЛ, Суггестопедия, ТПР.

Abstract. This thesis is devoted to modern methods used in teaching foreign language to young learners and their advantages. The given thesis briefly is described the most modern methods in detail today. Types of the most modern methods today, the rules of their use and their positive aspects are discussed.

Keywords: method, technique, procedure, PPP, TBL, Suggestopedia, TPR.

Introduction. As we know, in today's globalized world, the role of education is very important. Education is one of the most crucial fields that persistently demand updating. Given today's declining quality of education and problems such as qualified teachers leaving schools, the only solution to this is the immediate use of modern, innovative and creative teaching methods.

Every educated person should learn at least two or three languages, and of course young learners are used to teach foreign languages. In addition, in today's age of modern technology, it is not necessary to spend millions of money and go to a teacher or training center to learn a foreign language. All conditions are created in our country for everyone who wants to learn a language, buy books, audio books, learn using Internet resources, it's your choice. Especially for young learners, lessons written on the Internet using various modern methods are becoming very popular, and this creates the basis for the formation of their language skills.

The fact that studying on children as young language learners has continued to grow since the past few decades. New methods and techniques are developed in the quest for better understanding and outcome in teaching English as a foreign language to young learners.

Main part. As the Internet, various gadgets and modern technologies are developing and spreading widely, the most modern methods of foreign language teaching are being improved by skilled teachers. It's known that methods include procedures and techniques. They are easy to describe when procedures are fixed and the approach clear.

It is known that modern and innovative methods of education are a set of tools that we can use to achieve educational goals effectively and interactively. Nowadays, it is becoming common for most students to learn at least two foreign languages. You know that it is important for every skilled teacher to know the modern methods of teaching a foreign language and special teaching techniques,

and it is of course important to take into account the level of knowledge, requirements and interests of students learning foreign languages.

There are several modern methods in foreign language teaching and we can analyze some of them. **Communicative** and **constructive** methods are recognized as the main methods of teaching foreign languages at the stage of development of methodical science. The goal of the communicative method is the acquisition of communicative competence, which means that the texts should present conflicts that encourage learners to express their opinions. Advantage of this method is that students improve their speaking skills, overcome the fear of mistakes.

The most popular methods on which teaching English to young learners is based are the methods listed, for example, by Larsen-Freeman – the Audio-lingualism, Presentation-Practice-Production and its alternatives; Communicative approach, Task-based learning, The Silent Way, Suggestopedia, Total Physical Response and so on. Two of the well-known methods EFL teaching is PPP and TBL. Basically, both PPP and TBL promote rich exposures to the target language.

The differences are TBL offers far more opportunities for free language use, is genuinely freer of language control, and learners rely on their own linguistic resources. TBL begins by providing learners a genuine experience of language and then helps them to analyze the language in order to help them learn more effectively. While in PPP, the exposure of the target language is more restricted. PPP controls the learner's experience of language by focusing on a single language item and then looks for some activities to practice them.

Teaching a foreign language by the Internet. Today, the prospects for using Internet technologies are wide enough. This may include: email correspondence with residents of English-speaking countries; participation in international Internet conferences, seminars and other similar network projects; creation and networking of sites and presentations - they can be created jointly by the teacher and the student. In addition, presentations between teachers from different countries are possible.

Some questionnaires show that the most common methods are chants, CD-s with songs or poems, games and worksheets. Flashcards and puppets seem to be also used often but the books and DVD-s do not appear very popular. The reason for that is most probably the fact that many kindergartens in Uzbekistan lack suitable equipment such as TV or a DVD player and also that since there is not an official program for English in kindergartens there are not many suitable DVD materials or books for such young learners.

One of the modern and innovative methods of education is blended learning, and now several researchers and teachers are actively working on improving the educational process, knowledge transfer and assimilation. This type of education allows combining traditional methods and innovative technologies.

There are some crucial advantages of blended learning which we mentioned above. For instance, proponents cite two major educational advantages of this approach: the ability to collect information and the alignment of knowledge and assessments. A third advantage of blended learning is that one teacher can teach many people at the same time. Blended learning allows teachers to reallocate resources and improve academic performance

Conclusion. In conclusion, it should be said that modern language teaching is more cultural that aimed at the formation of a person, it involves self-analysis and new knowledge having systematization skills. New methods throughout the system are an integral part of modernization. For sure, teachers are the most get acquainted with advanced approaches and later combine them and their own significant growth in the education system can be achieved by using it in their work. Many organizations use multimedia capabilities to send and receive information is moving to a new level using from computers and other devices use determines the success of the entire educational process. Speech skills in trainings during the educational process sufficient attention should be paid to the formation and development of social flexibility need.

To sum up, in formation of interest to a subject the important role is played by the person of the teacher. Therefore a pledge of successful mastering a foreign language by the students is professionalism of the teacher which should in the work not only take into account the methodical

principles underlying teaching, but also to be in constant search of new receptions and methods of teaching which will recover a lesson, will make it fascinating, cognitive and remembered. In addition, the success of each lesson in education has many aspects it depends on the correct organization of training. The lesson belongs to the teacher and the student should be based on creative cooperation. Only then students can think independently they receive, their will is trained.

TA'LIM JARAYONLARIDA VIRTUAL HAQIQAT TEXNOLOGIYASINING O'RNI

N.A.Mamadjanova, PhD, Namangan Davlat Universiteti, Namangan

Annotatsiya. Ushbu maqola ta'lim jarayonlarida virtual haqiqat texnologiyasining o'rni haqida bo'lib, virtual haqiqat texnologiyasining talimdagi ahamiyati, foyda taraflari yoritilgan. VR texnologiyasi yordamida o'quvchilar bir necha soniya ichida boshqa mamlakatga sayohat qilishlari, Astronomiyani o'rganish uchun koinotga chiqishi yoki bir necha metr uzoqlikda turgan dinosavrlar bilan yura davri haqida ma'lumot olishlari mumkin hamda ularda tasavvur qilish ko'nikmalari va olam yangiliklaridan boxabar bo'lishlari mumkin.

Kalit so'zlar: VR, virtual reality, virtual haqiqat, kengaytirilgan haqiqat.

Аннотация. В данной статье речь идет о роли технологии виртуальной реальности в образовательных процессах, подчеркивается важность и преимущества технологии виртуальной реальности в образовании. С помощью технологии VR студенты могут за считанные секунды отправиться в другую страну, отправиться в космос для изучения астрономии или узнать о юрском периоде с динозаврами, стоящими всего в нескольких метрах от них, а также развить свои навыки воображения и познания мира. брать.

Ключевые слова: VR, виртуальная реальность, виртуальная реальность, дополненная реальность.

Abstract. This article is about the role of virtual reality technology in educational processes, the importance and benefits of virtual reality technology in education are highlighted. With VR technology, students can travel to another country in a matter of seconds, go into space to study astronomy, or learn about the Jurassic period with dinosaurs standing just a few meters away, and develop their imagination skills and knowledge of the world can take.

Keywords: VR, virtual reality, virtual reality, augmented reality.

Ta'lim sohasi shunchalik jadal suratlarda tez o'smoqdaki, o'qituvchilar doimo zamonaviy strategiyalarga moslashishi va ularni amaliyoti bilan doimo moslashib yurishi kerak. Aks holda, bu yangi texnologiyalarsiz talim jarayonlarini boshqarish talim sifatini tushib ketishiga olib keladi.

Innovatsion o'qitish usullari sinfda eng ilg'or texnologiyalarni qo'llash yoki ta'limning eng so'nggi tendensiyalaridan doimo xabardor bo'lish emas, aslida innovatsion o'qitish usullari ta'lim-tarbiya usullaridir! Innovatsion o'qitish usullari o'quvchilarga ko'proq e'tibor qaratuvchi yangi o'qitish strategiyalaridan foydalanishga imkon beruvchi samarali yo'llar hisoblanadi. Barcha innovatsion metodlar o'quvchilarni darslarda faol ishtirok etishga va dars davomida o'rtoqlari va o'qituvchi bilan muloqot qilishga undaydi.
