EDUCATION AS THE KEY TO SOCIAL PROGRESS

Ernazarova Munishkhan Zhorakulovna

Chirchik State Pedagogical University

Teacher of the Department of Pedagogy

ABSTRACT

This article highlights the fact that quality education is the guarantee of human well-being, and in this regard, information about the reforms being carried out in our country, the ideas put forward and the tasks to be fulfilled.

Key words: education, higher education, teacher, pupil, student, globalization process, intellect, society.

АННОТАЦИЯ

В данной статье освещается тот факт, что качественное образование является залогом благополучия человека, и в связи с этим представлена информация о реформах, проводимых в нашей стране, выдвигаемых идеях и задачах, которые предстоит реализовать.

Ключевые слова: образование, высшее образование, учитель, ученик, студент, процесс глобализации, интеллект, общество.

People with intellectual potential are independent-minded, skilled, knowledgeable, high human qualities capable of ensuring modern development of international standards. In independent Uzbekistan, the state policy aimed at forming a new generation of high intellectual potential personnel is being pursued. One of the main tasks carried out in this way is the establishment of a new educational system that will be the basis for the development of independent Uzbekistan. The Decree of the President of the Republic of Uzbekistan on the approval of the national program for the development of public education in 2022-2026 [1]²⁰ is a clear example of this.

One of the urgent problems on the agenda of our country today is to improve the quality of education.

After all, at the heart of improving the quality of education lies the great goal and task of training qualified specialists who are able to bring the country to the ranks of developed countries.

Our Honorable President Shavkat Miromonovich Mirziyoyev also emphasized that "Increasing the quality of education is the only correct way of development of New Uzbekistan."

Today's globalization process is intensifying the competitive environment in all sectors around the world. In such conditions, only the introduction of education based on providing people with modern quality knowledge can ensure the international competitiveness of the state to the whole world. The establishment of education based on modern quality education in society leads to an increase in the demand for non-standard, creative and critical thinking specialists with high intellectual potential.

In order to implement high-quality education and achieve high results, not only specialists in the field of education, but also every member of the society must approach with great responsibility and

dedication. After all, the leader of our country is putting forward a unique call that "education should become a practical action of the general public".

Another important aspect in this regard is that from 2023 school education should be reformed on the basis of international educational programs and new textbooks should be developed, and separate scientific institutes and laboratories should be established to introduce advanced educational standards and methods. Achieving high results in education, in turn, requires creating comfortable and modern conditions for students and teachers in schools. In this regard, 70 new schools will be built and 460 schools will be expanded in our country in 2023. It is worth noting that in 2024, 100 school construction projects will be started with the participation of private investments, and in the next five years, it is planned to increase their number to 1 thousand. .

It was also decided that starting from 2023, on the basis of the new program, European vocational education standards will be introduced in one technical school in each region, and in the next five years, all colleges and technical schools will be covered by this system.

At the same time, in order to expand support for talented young people, the task of establishing separate engineering schools in the fields of chemical industry, transport and energy, electrical engineering, and thereby creating a system of training engineers of the new era was also set.

In recent years, in order to ensure human well-being by improving the quality of education in our country, we can see that the number of universities has increased by 2.5 times, and the level of coverage has increased by more than 4 times. The head of our state also emphasized that universities should take steps to increase their attractiveness, including that rectors, professors and teachers should be active in these processes and introduce modern, advanced teaching methods.

In conclusion, it should be noted that the work carried out in the field of quality education in our Republic, reforms in the field of education are the shortest and most rational way to achieve new goals in education. Where there are good conditions for education and science, there will be mature and patriotic personnel in all respects. Therefore, it can be said with confidence that fundamental changes in this field will show their results in the medium and long term.
